Summary

I build **responsive layouts** with a focus on **clean, user-friendly interfaces** that adapt well across devices. My approach is guided by a basic understanding of **UI and UX principles** to ensure a smooth experience.
I'm passionate about crafting intuitive, responsive web interfaces and constantly seeking opportunities to grow through real-world experience.

I am a target-driven and challenge-oriented individual, fully committed to delivering results in any task I undertake.

I'm confident in **translating designs into functional code**. One of my projects was a **Netflix clone**, where I focused on **closely matching the original interface** for a polished and familiar feel.
I've completed **10+ hands-on web projects**. While I've mostly worked independently, I'm eager to gain experience in team environments and contribute to collaborative projects.

My Projects

03/25 - 04/25	**Netflix Clone Website Projects**

https://netflix-clone-ivaz.vercel.app/

- Developed a fully functional **Netflix-inspired streaming app** with secure user authentication and a responsive design optimized for all screen sizes.

- Integrated **The Movie Database (TMDB) API** to dynamically fetch and display movie trailers categorized by genres and trends.

- Built user-centric features including **profile locking, profile customization, watch history tracking,** and **custom watchlists** for a personalized viewing experience.

- Designed a **modern, intuitive user interface** that closely emulates the official Netflix layout, ensuring familiar navigation and smooth interaction across the platform.

04/04/25 - 09/04/25	**VazzChat Website App**

https://vazzchat.vercel.app/

- Developed a responsive web-based chat application with real-time messaging functionality using a shared Room ID and custom usernames.

- Implemented **real-time database integration** to enable seamless message syncing across multiple devices or users in the same chat room.

- Built a **lightweight chatroom sharing system** where users can instantly join conversations by entering the same Room ID.

- Engineered a **reply system** that allows users to quote and respond directly to specific messages for better conversation flow.

- Designed with **real-time refetch logic**, ensuring messages stay up-to-date without manual refreshes across all connected users.

01/25 - 02/25	**Weather Website App**

https://weather-app-blush-seven-98.vercel.app/

- Developed a **responsive web-based weather application** using the OpenWeather API to deliver up-to-date weather data in real-time.

- Enabled flexible input options including **city name search, coordinate-based input (latitude & longitude),** and **current location detection** for user convenience.

- Added **pre-set city shortcuts** for quick access to frequently viewed or popular locations.

- Implemented **unit conversion toggle** to seamlessly switch between **metric and imperial systems** for temperature, wind speed, and other weather metrics.

- Utilized modern frontend technologies to optimize performance and ensure smooth functionality across various devices and screen sizes.
- Designed a **clean and intuitive user interface** focused on clarity, responsiveness, and accessibility.

08/24 - 12/24   **Amazon Clone Website Projects**

https://ivaz7.github.io/Amazon-Clone-Project/amazon.html

- Developed a **minimalist Amazon-inspired web app** focused on core shopping functionality and smooth user experience.
- Built a dynamic **product listing interface** showcasing item names, prices, and estimated delivery dates to simulate real-world browsing.
- Designed a **responsive and clean user interface** to replicate the feel of an online marketplace without implementing authentication or checkout systems.
- Prioritized **ease of navigation and user flow**, allowing users to intuitively explore and select products in a simplified shopping simulation.
